

# **NANOPROTHER II: Tumor-targeted nanomedicines based on therapeutic protein-only nanoparticles.**

## **ADDRESSED PATHOLOGY:**

Cancer

## **GENERAL OBJECTIVE:**

Development of protein-only nanoparticles with potential as drugs in therapies of cancer. These protein-only nanoparticles binds, internalize and reach the nucleus of cancer stem cells of several cancer disease models, and it is expected that they have a healing effect.

## **PARTICIPANTS:**

- Dr. Antoni Villaverde. NBT-UAB
- Dr. Jaume Veciana. ICMAB-CSIC.
- Dr. Simó Schwartz. GDLF-HUVH
- Dr. Ramon Eritja. IQAC-CSIC

## **CLINICAL GROUP:**

- Dr. Ramon Mangués. GOA-HSCSP
